widely adopted this uniquely comprehensive text introduces the techniques and concepts of statistics in human and physical geography unlike other texts that gloss over the conceptual foundations and focus solely on method the book explains not only how to apply quantitative tools but also why and how they work students gain important skills for utilizing both conventional and spatial statistics in their own research as well as for critically evaluating the work of others most chapters are self contained in order to provide maximum flexibility in course design requiring no math beyond al

statistics courses frequently gloss over the foundations of statistical analysis and concentrate solely on method as a result students are able to perform the techniques but do not know when to utilize them or how to interpret results incorporating statistical methods designed to give geography students a solid understanding of key statistical concepts this in depth text both presents basic techniques and fully explores their meaning and importance structured for optimal classroom use the book includes helpful student exercises with answer keys four broad sections provide comprehensive coverage of descriptive statistics inferential statistics statistical relationships between two variables and modern methods of analysis

first published in 1978 for the non mathematician however even the simpler introductory books on statistics often raise considerable problems in this second edition first some attention has been given to the problem of the transformation of data in order to reinforce the appreciation of the need for normally distributed data for the use of so many techniques secondly the use of probability paper at least in simple terms has been introduced to illustrate the ways in which the labour of probability assessments can be circumvented thirdly radical changes have been made plus considerable expansion added to the theme of non parametric testing to provide a more systematic approach to what is a most important group of possible techniques for geographers fourthly change and expansion are also reflected in the sections on correlation and regression including some simple consideration of curvilinear relationships and the presentation of computational techniques more geared to the use of desk calculators rather than long hand methods finally the bibliography has also been expanded to incorporate a wider range of books on techniques and a selection of

research papers using such techniques in a geographical or near geographical context
